Our president :  
Fatoumata Zerbo

The association „Notre Soleil“ wants to work towards a reduction in pollution and deforestation, an alleviation of the women’s daily chores, a reduction in CO2 emissions, and a more economic consumption of non-renewable energies.

It wants to achieve these objectives through the promotion and dissemination of solar technology in Burkina Faso. « Notre Soleil » wants to raise the population’s awareness of the advantages in daily life of solar lighting, solar pumps, of solar cooking (with solar ovens and parabolic cookers), of dryers for the preservation of food (fruit, vegetables, fish etc.)and of solar warm-water heaters.

Please join in our efforts to save our country’s beautiful nature and to preserve our climate.

Members of Notre Soleil  
have built their own solar  
ovens.

Sunrays provide the energy  
for baking these cakes in 1  
hour and 20 minutes in a  
solar oven.

A beautiful joint effort: come and  
participate in one of our workshops and  
build your own solar oven.
